IdeApps Survey

This survey is anonymous.

IdeApps is a responsive web application that allows users to post and select project ideas by swiping for ideas that have caught their attention or right for unappealing concepts. Users will be able to share ideas and find people to collaborate with as the members of this app will provide unique and diverse ideas. Please take time to do this survey, which will only take a maximum of 5 minutes.

Q1. Did you find the website easy to navigate? Why?

Some buttons don't work but of the buttons that did, they were clear and of sufficient size making it easy to navigate.

Q2. What did you like most when using the website? Are there any feature you would like improved or implemented to the website.

Clicking big refresh button at the bottom and having a new slide animate out and in. I would like a fully working website implemented. Frameworks pop out of their intended box.

Q3. In your opinion, does the website cater to the needs of users with certain disabilities (eg: visual impairment, neurological disability)? Why?

yes, buttons are clear making it easier to see buttons for the visually impaired. No because when testing with NVDA screen reader some buttons were not labelled so the screen reader would just read out "button" or jiberish, so the user has no idea what it actually does.

Q4. Were the button elements consistent and familiar? Eg home button, like button, share, etc

YES.

Q5. Rate the swipe to find project user interface.

Very unsatisfied 1 O 2 O 3 O 4 O 5 O Very satisfied

Rating = 4

Q6. Rate the contents of the project detail page.

Very unsatisfied 1 O 2 O 3 O 4 O 5 O Very satisfied

Rating = 4

Q7. Rate the visual design of the website.

Very unsatisfied 1 O 2 O 3 O 4 O 5 O Very satisfied

Rating = 2
